The purpose of these guidelines (“Test Guidelines”) is to elaborate the principles contained in the General Introduction (document TG/1/3), and its associated TGP documents, into detailed practical guidance for the harmonized examination of distinctness, uniformity and stability (DUS) and, in particular, to identify appropriate characteristics for the examination of DUS and production of harmonized variety descriptions.

#### ASSOCIATED DOCUMENTS

These Test Guidelines should be read in conjunction with the General Introduction and its associated TGP documents.

## 1. Subject of these Test Guidelines

These Test Guidelines apply to all varieties of artificial hybrid genus *Mokara*, of the family *Orchidaceae*. The genus *Mokara* is a manmade genus that consists of 3 natural genus combinations of (*Arachnis* x *Ascocentrum* x *Vanda*) in the parental background. *Mokara* can also have the combination make-up of following genera:

*Ascocenda* (*Ascocentrum* x *Vanda*) x *Arachnis*  
*Aranda* (*Arachnis* x *Vanda*) x *Ascocentrum*  
*Ascorachnis* (*Ascocentrum* x *Arachnis*) x *Vanda*  
*Ascocenda* x *Aranda*  
*Ascocenda* x *Ascorachnis*  
*Aranda* x *Ascorachnis*  
*Mokara* x *Arachnis*  
*Mokara* x *Ascocentrum*  
*Mokara* x *Vanda*  
*Mokara* x *Ascocenda*  
*Mokara* x *Aranda*  
*Mokara* x *Ascorachnis*

Progeny resulting in the selfing or sibing of *Mokara* also applies to this test guideline. Selfings refers to a population resulting from the self pollination of the *Mokara* flowers of the same plant, while Siblings refers to a population resulting from the cross pollination of 2 different *Mokara* flowers of different or the same varieties.

## 2. Material Required

2.1 The competent authorities decide on the quantity and quality of the plant material required for testing the variety and when and where it is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must ensure that all customs formalities and phytosanitary requirements are complied with.

2.2 The material is to be supplied in the form of matured plants that have not flowered before with an emerging spike.

2.3 The minimum quantity of plant material, to be supplied by the applicant, should be:

10 plants.

2.4 The plant material supplied should be visibly healthy, not lacking in vigor, nor affected by any important pest or disease.

2.5 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

### 3. Method of Examination

#### 3.1 *Number of Growing Cycles*

The minimum duration of tests should normally be one single flowering period from emerging spike to the last opened flower.

#### 3.2 *Testing Place*

Tests are normally conducted at one place. In the case of tests conducted at more than one place, guidance is provided in TGP/9 "Examining Distinctness".

#### 3.3 *Conditions for Conducting the Examination*

3.3.1 The tests should be carried out under conditions ensuring satisfactory growth for the expression of the relevant characteristics of the variety and for the conduct of the examination.

3.3.2 The optimum stage of development for the assessment of each characteristic is indicated by a number in the second column of the Table of Characteristics. The stages of development denoted by each number are described at the end of Chapter 8.

3.3.3 Because daylight varies, colour determinations made against a colour chart should be made either in a suitable cabinet providing artificial daylight or in the middle of the day in a room without direct sunlight. The spectral distribution of the illuminant for artificial daylight should conform with the CIE Standard of Preferred Daylight D 6500 and should fall within the tolerances set out in the British Standard 950, Part I. These determinations should be made with the plant part placed against a white background. The colour chart and version used should be specified in the variety descriptions.

#### 3.4 *Test Design*

3.4.1 Each test should be designed to result in a total of at least 10 plants.

3.4.2 The design of the tests should be such that plants or parts of plants may be removed for measurement or counting without prejudice to the observations which must be made, up to the end of the growing cycle.

#### 3.5 *Number of Plants / Parts of Plants to be Examined*

Unless otherwise indicated, all observations should be made on 10 plants or parts taken from each of 10 plants excluding off type.

#### 3.6 *Additional Tests*

Additional tests, for examining relevant characteristics, may be established.

#### 4. Assessment of Distinctness, Uniformity and Stability

##### 4.1 *Distinctness*

###### 4.1.1 General Recommendations

It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding distinctness. However, the following points are provided for elaboration or emphasis in these Test Guidelines.

###### 4.1.2 Consistent Differences

The differences observed between varieties may be so clear that more than one growing cycle is not necessary. In addition, in some circumstances, the influence of the environment is not such that more than a single growing cycle is required to provide assurance that the differences observed between varieties are sufficiently consistent. One means of ensuring that a difference in a characteristic, observed in a growing trial, is sufficiently consistent is to examine the characteristic in at least two independent growing cycles.

###### 4.1.3 Clear Differences

Determining whether a difference between two varieties is clear depends on many factors, and should consider, in particular, the type of expression of the characteristic being examined, i.e. whether it is expressed in a qualitative, quantitative, or pseudo-qualitative manner. Therefore, it is important that users of these Test Guidelines are familiar with the recommendations contained in the General Introduction prior to making decisions regarding distinctness.

###### 4.1.4 Method of Observation

The recommended method of observing the characteristic for the purposes of distinctness is indicated by the following key in the second column of the Table of Characteristics (see document TGP/9 “Examining Distinctness”, Section 4 “Observation of characteristics”):

MG: single measurement of a group of plants or parts of plants

MS: measurement of a number of individual plants or parts of plants

VG: visual assessment by a single observation of a group of plants or parts of plants

VS: visual assessment by observation of individual plants or parts of plants

Type of observation: visual (V) or measurement (M)

“Visual” observation (V) is an observation made on the basis of the expert’s judgment. For the purposes of this document, “visual” observation refers to the sensory observations of the experts and, therefore, also includes smell, taste and touch. Visual observation includes observations where the expert uses reference points (e.g. diagrams, example varieties, side-by-side comparison) or non-linear charts (e.g. colour charts). Measurement (M) is an objective observation against a calibrated, linear scale e.g. using a ruler, weighing scales, colorimeter, dates, counts, etc.

Type of record: for a group of plants (G) or for single, individual plants (S)

For the purposes of distinctness, observations may be recorded as a single record for a group of plants or parts of plants (G), or may be recorded as records for a number of single, individual plants or parts of plants (S). In most cases, “G” provides a single record per variety and it is not possible or necessary to apply statistical methods in a plant-by-plant analysis for the assessment of distinctness.”

In cases where more than one method of observing the characteristic is indicated in the Table of Characteristics (e.g. VG/MG), guidance on selecting an appropriate method is provided in document TGP/9, Section 4.2.

#### **4.2     *Uniformity***

4.2.1 It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding uniformity. However, the following points are provided for elaboration or emphasis in these Test Guidelines:

4.2.2 For the assessment of uniformity, a population standard of 1% with an acceptance probability of at least 95% should be applied. In the case of a sample size of 10 plants, 1 off-type is allowed.

#### **4.3     *Stability***

4.3.1 In practice, it is not usual to perform tests of stability that produce results as certain as those of the testing of distinctness and uniformity. However, experience has demonstrated that, for many types of variety, when a variety has been shown to be uniform, it can also be considered to be stable.

4.3.2 Where appropriate, or in cases of doubt, stability may be tested, either by growing a further generation, or by testing a new plant stock to ensure that it exhibits the same characteristics as those shown by the previous material supplied.

### **5.     Grouping of Varieties and Organization of the Growing Trial**

5.1 The selection of varieties of common knowledge to be grown in the trial with the candidate varieties and the way in which these varieties are divided into groups to facilitate the assessment of distinctness are aided by the use of grouping characteristics.

5.2 Grouping characteristics are those in which the documented states of expression, even where produced at different locations, can be used, either individually or in combination with other such characteristics: (a) to select varieties of common knowledge that can be excluded from the growing trial used for examination of distinctness; and (b) to organize the growing trial so that similar varieties are grouped together.

5.3 The following have been agreed as useful grouping characteristics:

- a) Plant: width (characteristic 1)
- b) Leaf: attitude (characteristic 2)

- c) Inflorescence: number of flowers (characteristic 8)
- d) Flower: length (characteristic 11)
- e) Flower: width (characteristic 12)
- f) Dorsal sepal: ground colour (characteristic 20)
- g) Lateral sepal: ground colour (characteristic 31)
- h) Petal: ground colour (characteristic 42)
- i) Lip: apical lobe: divided apex (characteristic 50)
- j) Lip: apical lobe: wing on side (characteristic 51)
- k) Lip: apical lobe: ground colour of apex (characteristic 52)

5.4 Guidance for the use of grouping characteristics, in the process of examining distinctness, is provided through the General Introduction.

## 6. Introduction to the Table of Characteristics

### 6.1 *Categories of Characteristics*

#### 6.1.1 Standard Test Guidelines Characteristics

Standard Test Guidelines characteristics are those which are approved by UPOV for examination of DUS and from which members of the Union can select those suitable for their particular circumstances.

#### 6.1.2 Asterisked Characteristics

Asterisked characteristics (denoted by \*) are those included in the Test Guidelines which are important for the international harmonization of variety descriptions and should always be examined for DUS and included in the variety description by all members of the Union, except when the state of expression of a preceding characteristic or regional environmental conditions render this inappropriate.

### 6.2 *States of Expression and Corresponding Notes*

States of expression are given for each characteristic to define the characteristic and to harmonize descriptions. Each state of expression is allocated a corresponding numerical note for ease of recording of data and for the production and exchange of the description.

### 6.3 *Types of Expression*

An explanation of the types of expression of characteristics (qualitative, quantitative and pseudo-qualitative) is provided in the General Introduction.

### 6.4 *Example Varieties*

Where appropriate, example varieties are provided to clarify the states of expression of each characteristic.

**GREX INFORMATION:** For example, in the case of *Mokara Chark Kuan* ‘Orange’, the generic name is *Mokara*, the grex epithet is Chark Kuan, and the cultivar epithet is ‘Orange’. The grex epithet can be the name of a person; many orchids are named after the breeder, or

other prominent people. Such a cultivar is the individual plant and all its vegetatively propagated progeny that are identical to it.

#### 6.5 *Legend*

(\*) Asterisked characteristic – see Chapter 6.1.2

QL: Qualitative characteristic – see Chapter 6.3

QN: Quantitative characteristic – see Chapter 6.3

PQ: Pseudo-qualitative characteristic – see Chapter 6.3

(a)-(j) See Explanations on the Table of Characteristics in Chapter 8.1

## 8. Explanations on the Table of Characteristics

### 8.1 Explanations covering several characteristics

Characteristics containing the following key in the second column of the Table of Characteristics should be examined as indicated below:

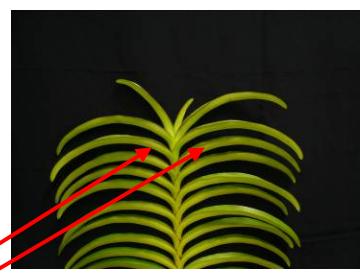

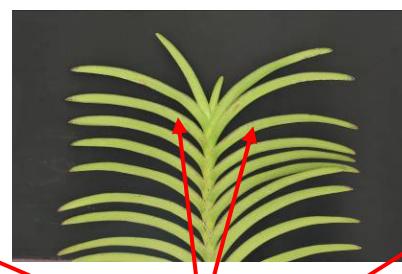

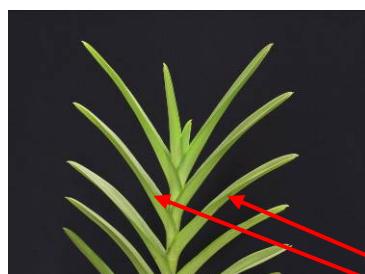

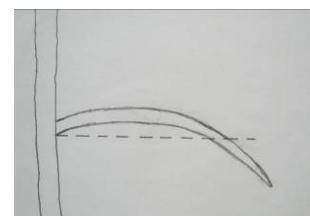

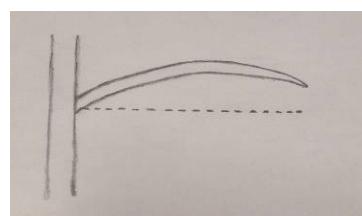

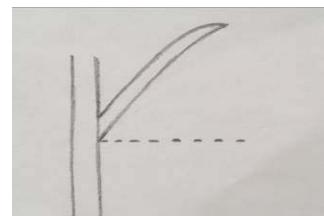

- (a) Observations on the leaf should be made on the 6<sup>th</sup> or 7<sup>th</sup> leaf from the top of a flowering plant. Width of the leaf is observed by opening and flattening the folded leaf. Length of the leaf is to be measured with a flexible tape following the natural curvature of the leaf.
- (b) Observations on the inflorescence should be made at when 70% of the flowers on the inflorescence have opened. Length of the inflorescence is to be measured by a flexible tape to follow the natural curvature from the base of the peduncle to the tip before the last immature bud. Total numbers of flowers should also include the buds.
- (c) Observations on the shape, length, width and colour of the flower and parts of the flower should be made on the 2<sup>nd</sup> or 3<sup>rd</sup> flower from the base, on the unextended organ. Unextended organ refers to the natural spread without flattening or extending the floral parts.
- (d) Observations on the colour of the sepals, the petals and the lip should be made on the front side of flower. Ground colour refers to the lightest colour. Marginal zone refers to the shading area along the margins.
- (e) Observation on the colour of eyes should be made on an undisturbed and intact pollinia cap.
- (f) Observation for flower fragrance should be done outdoor before noon on a warm day.

## 8.2 Explanations for individual characteristics

### Ad. 1: Plant: width

### Ad. 2: Leaf: attitude

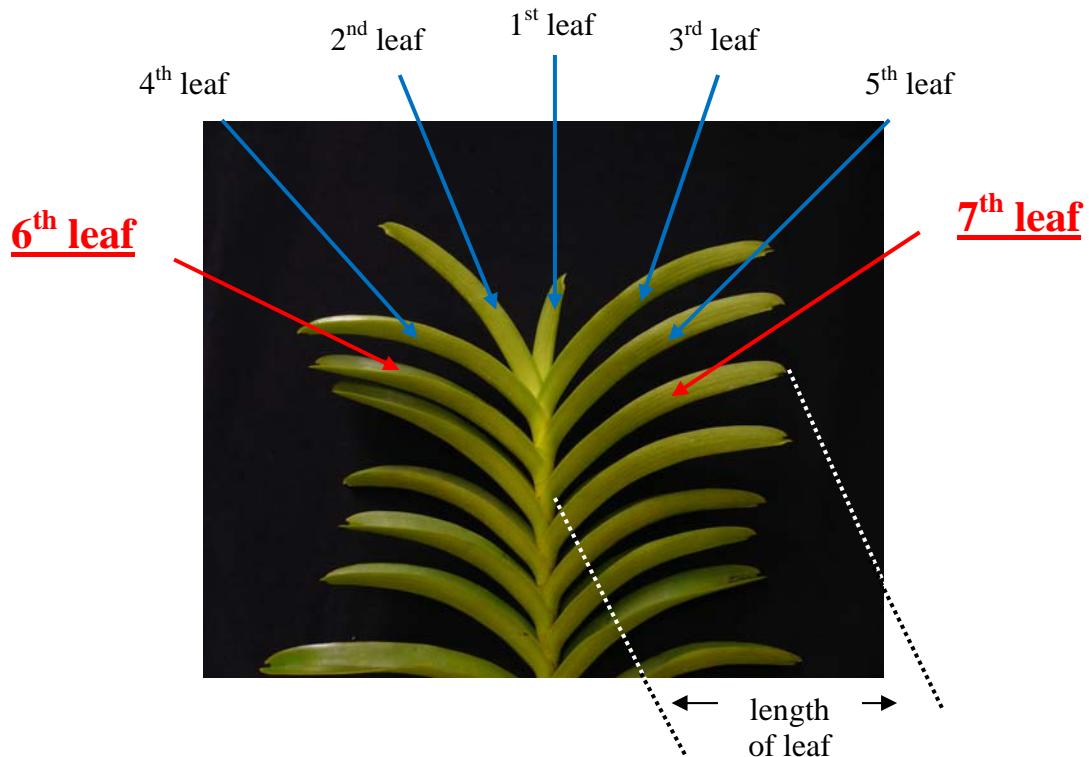

1  
erect

6<sup>th</sup> or 7<sup>th</sup> leaf  
2  
spreading

3  
pendulous

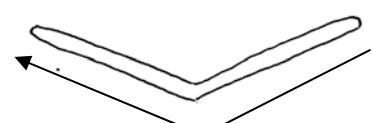

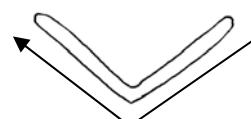

Ad. 3: Leaf: length

(All observations on the leaf should be made on the 6<sup>th</sup> or 7<sup>th</sup> leaf from the top)

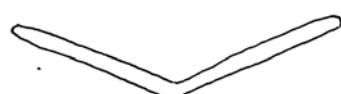

Ad. 4: Leaf: width

| 3                   | 5                    | 7                  |
|---------------------|----------------------|--------------------|
| Leaf: width (short) | Leaf: width (medium) | Leaf: width (long) |

Ad. 5: Leaf: folding

| 1                                       |
|---|
| Leaf: folding<br>(weak)<br>$> 90^\circ$ |

| 2  |
|--|
| Leaf: folding<br>(medium)<br>$45^\circ - 90^\circ$ |

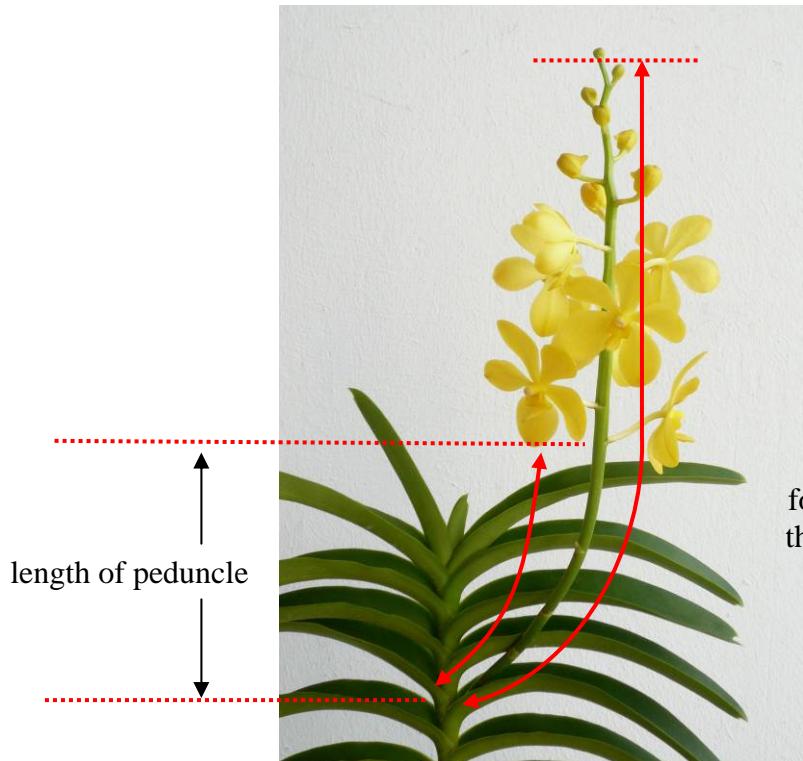

| 3   |
|---|
| Leaf: folding<br>(strong)<br>$0^\circ - 45^\circ$ |

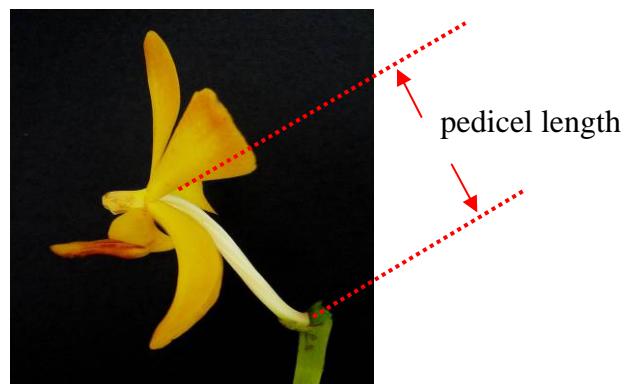

Folding of the leaf is observed at the mid-point of the leaf length.

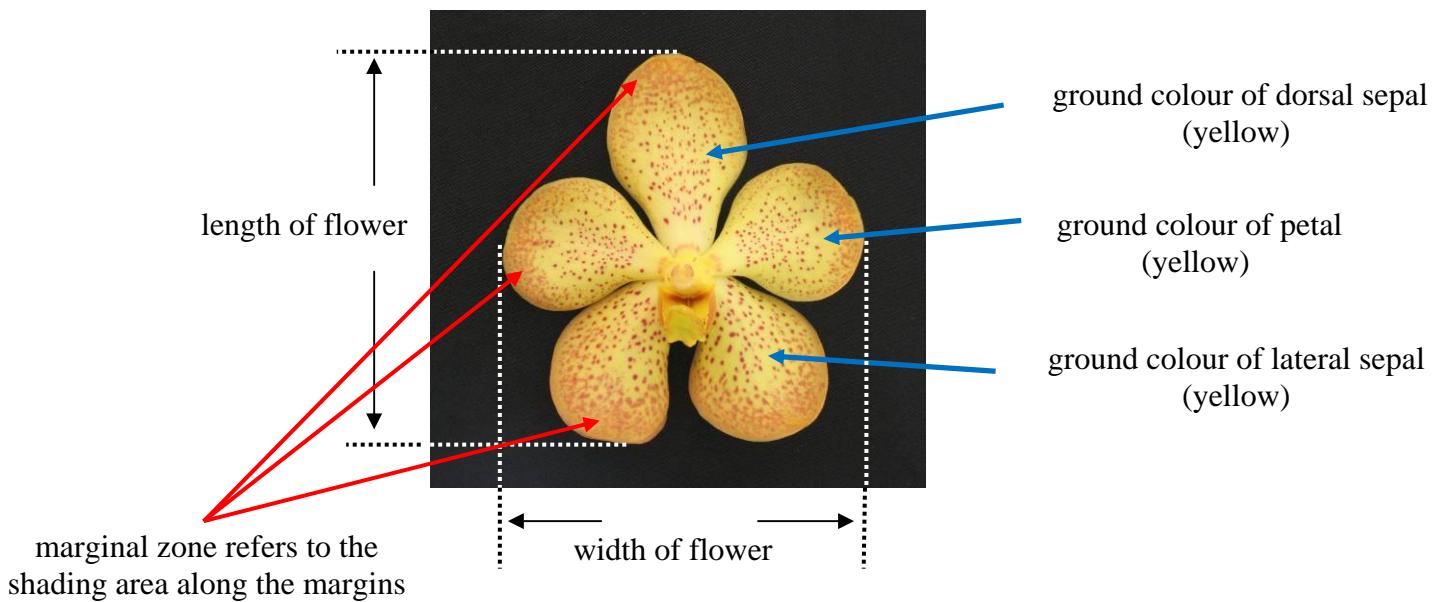

Ad. 6: Inflorescence: length (including peduncle)  
Ad. 7: Inflorescence: length of peduncle

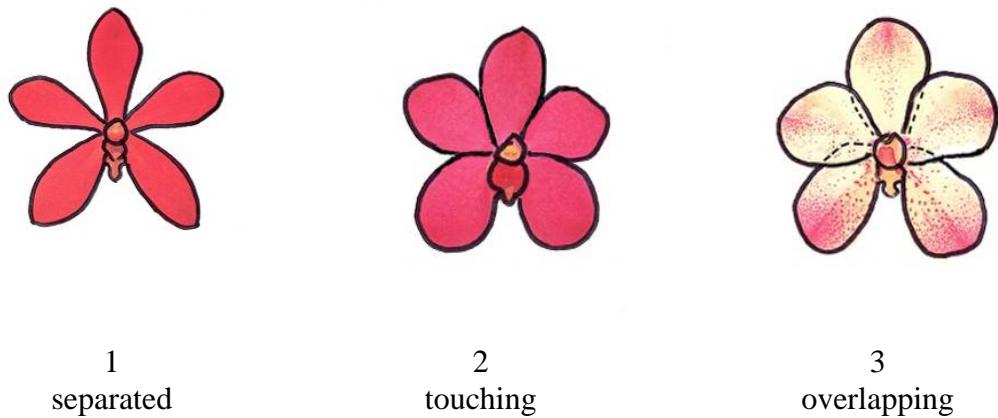

Ad. 10: Flower: length of pedicel

- Ad. 11: Flower: length  
Ad. 12: Flower: width  
Ad. 20: Dorsal sepal: ground colour  
Ad. 22: Dorsal sepal: colour of marginal zone  
Ad. 31: Lateral sepal: ground colour  
Ad. 33: Lateral sepal: colour of marginal zone  
Ad. 42: Petal: ground colour  
Ad. 44: Petal: colour of marginal zone

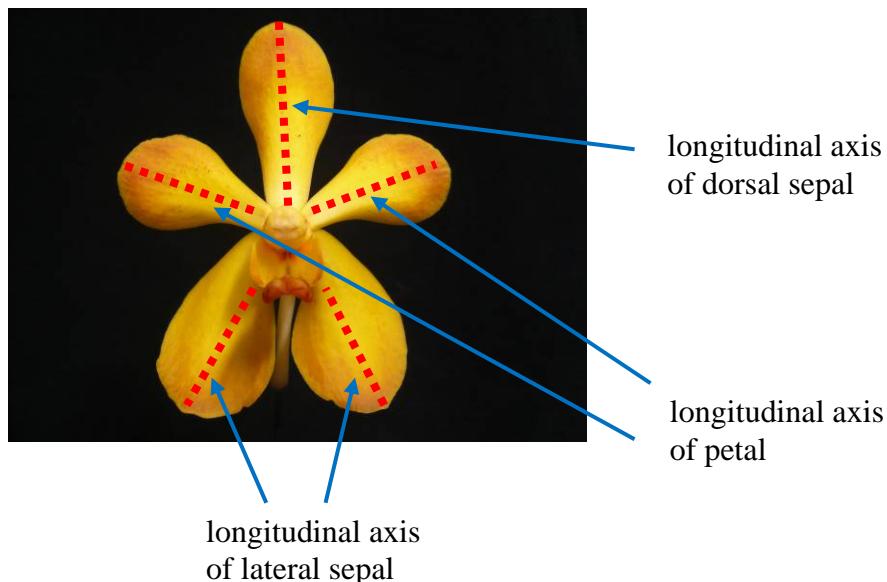

- Ad. 13: Flower: separation of sepals and petals

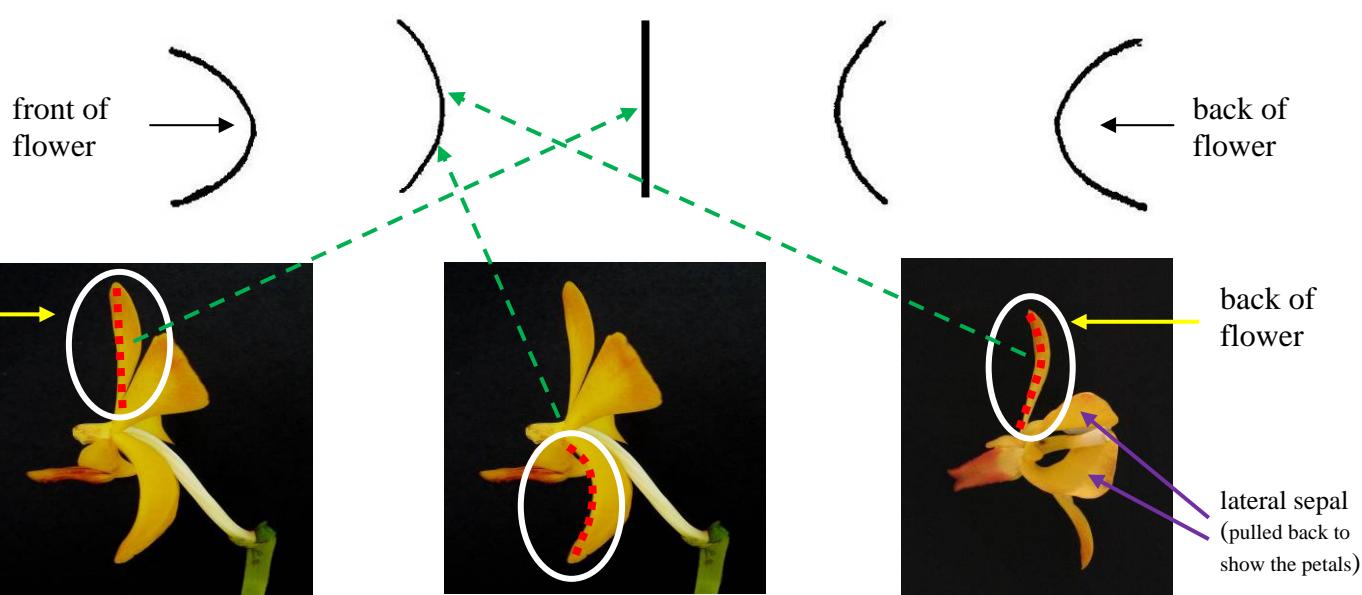

Ad. 15: Dorsal sepal: curvature in longitudinal axis

Ad. 26: Lateral sepal: curvature in longitudinal axis

Ad. 37: Petal: curvature in longitudinal axis

|                       |                     |               |                    |                      |
|-----------------------|---------------------|---------------|--------------------|----------------------|
| 1<br>strongly concave | 3<br>weakly concave | 5<br>straight | 7<br>weakly convex | 9<br>strongly convex |
|-----------------------|---------------------|---------------|--------------------|----------------------|

Ad. 15: Dorsal sepal:  
curvature in longitudinal axis

(to be observed by holding the dorsal sepal into a vertical position and **view from the side** – this case is straight)

Ad. 26: Lateral sepal:  
curvature in longitudinal axis

(to be observed by holding the lateral sepal into a vertical position and **view from the side** – this case is weakly concave)

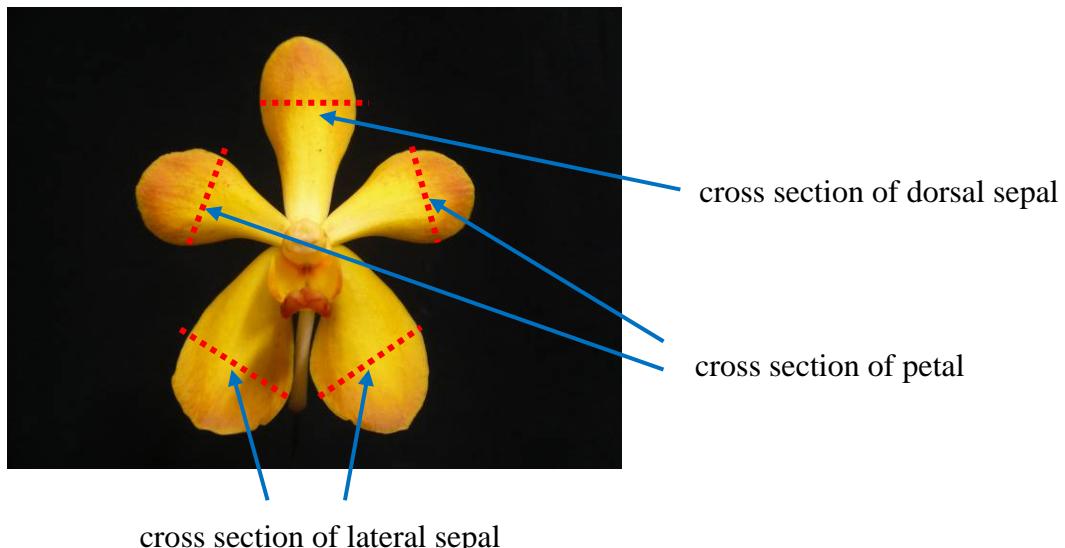

Ad. 37: Petal:  
curvature in longitudinal axis

(to be observed by pulling back the lateral sepals, turn the petal into a vertical position and **view from the side** – this case is weakly concave)

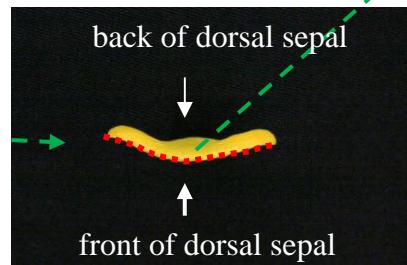

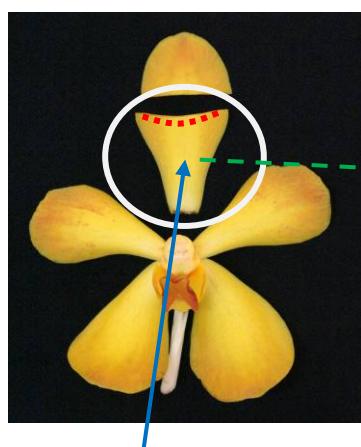

Ad. 16: Dorsal sepal: curvature in cross section

Ad. 27: Lateral sepal: curvature in cross section

Ad. 38: Petal: curvature in cross section

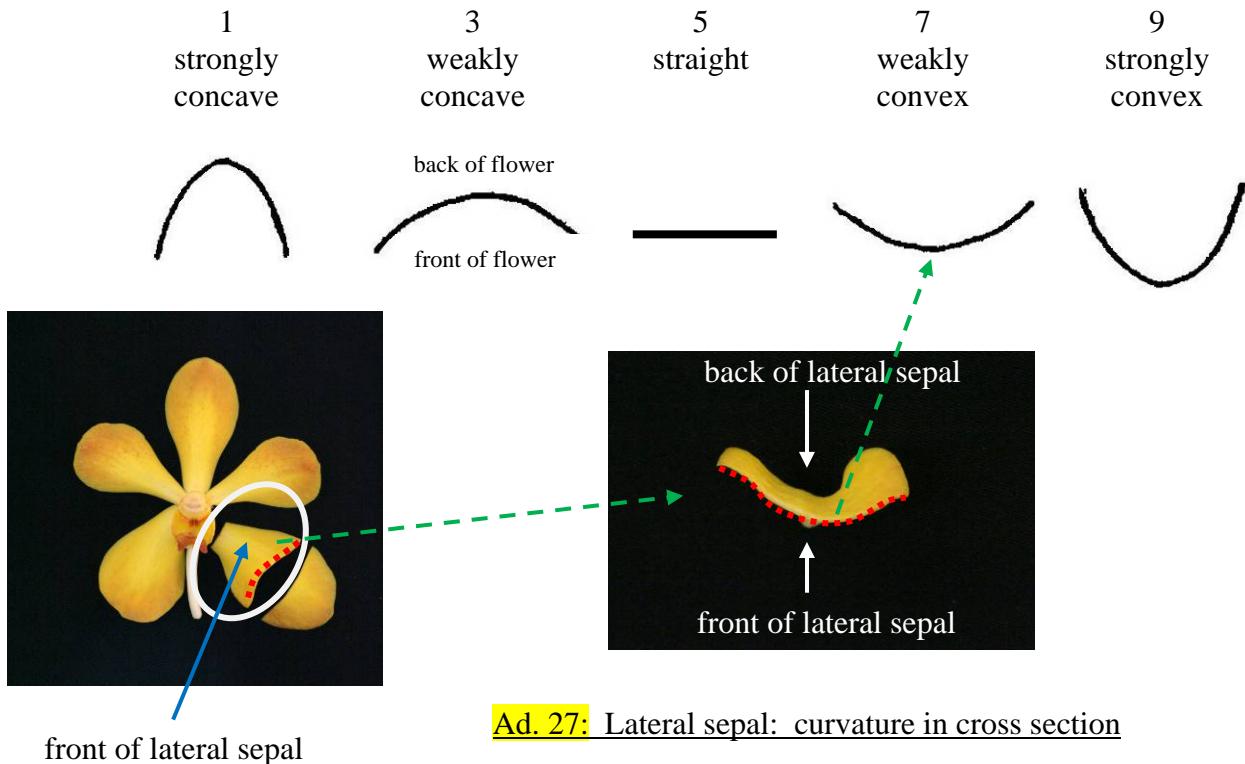

|                  |                |          |               |                 |
|------------------|----------------|----------|---------------|-----------------|
| 1                | 3              | 5        | 7             | 9               |
| strongly concave | weakly concave | straight | weakly convex | strongly convex |

Ad. 16: Dorsal sepal: curvature in cross section

To be observed by the following steps:

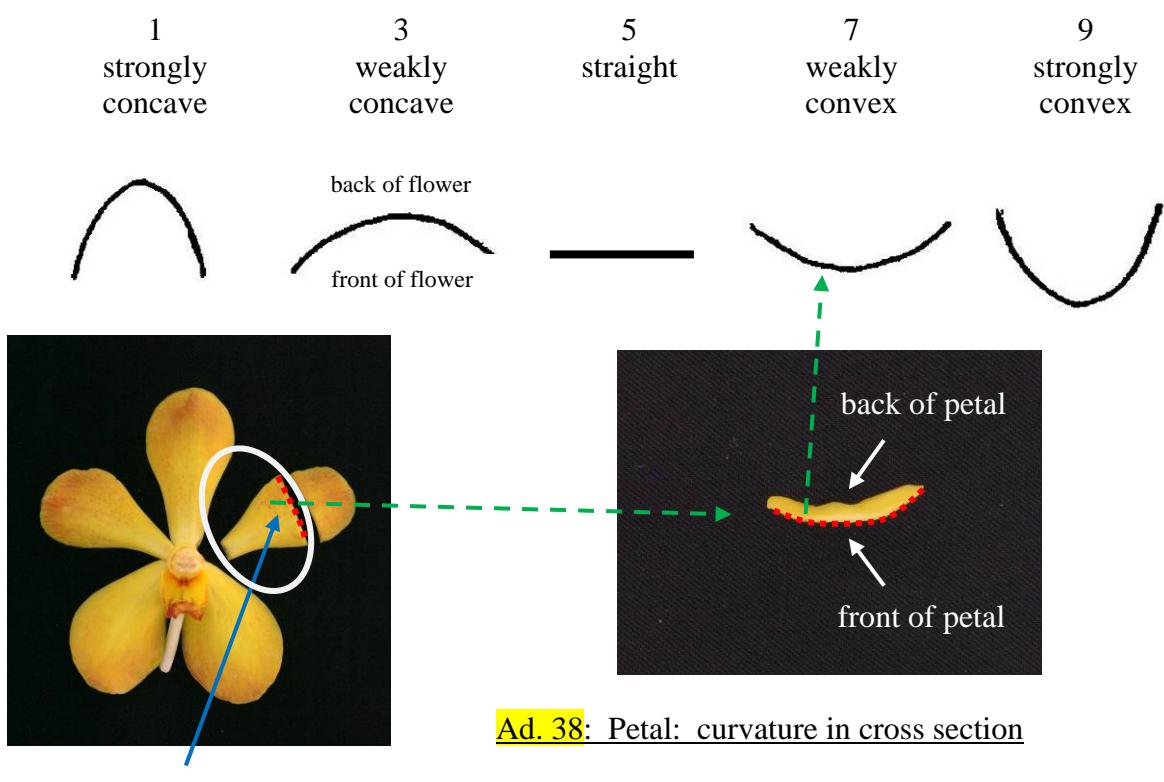

- detach the dorsal sepal
- use a razor blade to cut it across at the middle portion
- with the front of the dorsal sepal facing you and view from the top of cross section – this case is weakly convex

**Ad. 27: Lateral sepal: curvature in cross section**

To be observed by the following steps:

- detach the lateral sepal
- use a razor blade to cut it across at the middle portion
- with the front of the lateral sepal facing you and view from the top of cross section – this case is weakly convex

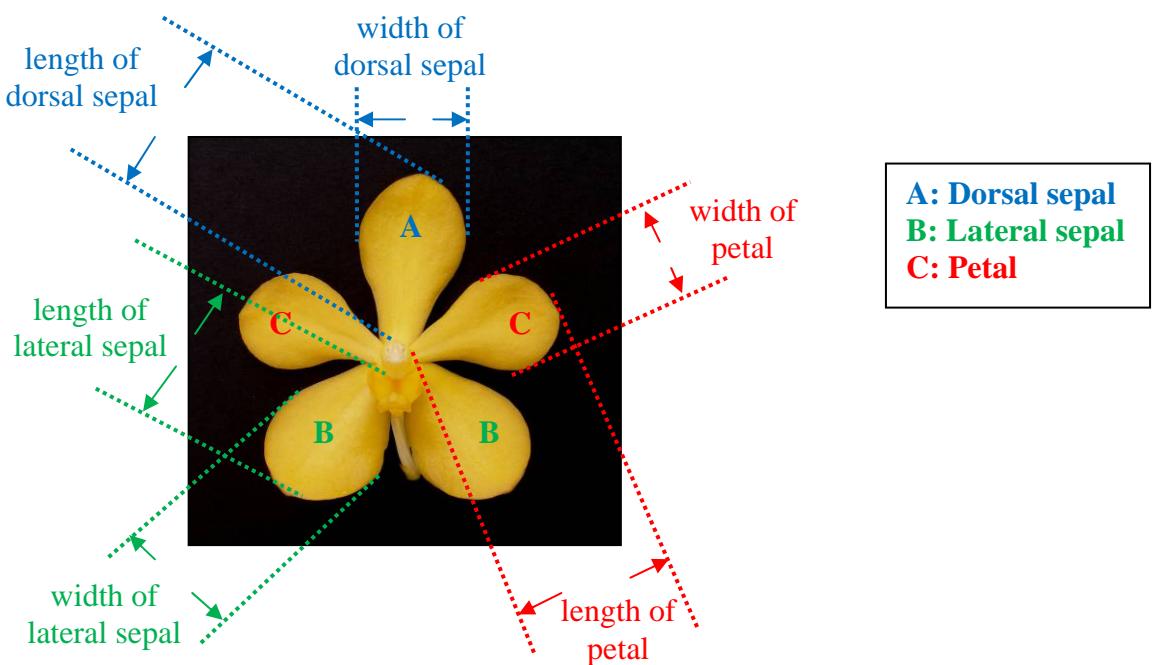

**Ad. 38: Petal: curvature in cross section**

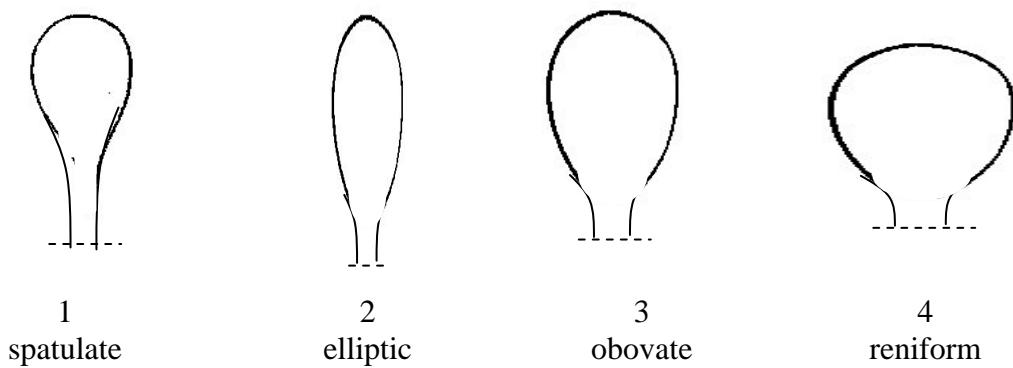

To be observed by the following steps:

- detach the petal
- use a razor blade to cut it across at the middle portion
- with the front of the petal facing you and view from the top of cross section – this case is weakly convex

- Ad. 17: Dorsal sepal: length  
Ad. 18: Dorsal sepal: width  
Ad. 28: Lateral sepal: length  
Ad. 29: Lateral sepal: width  
Ad. 39: Petal: length  
Ad. 40: Petal: width

- Ad. 19: Dorsal sepal: shape  
Ad. 30: Lateral sepal: shape  
Ad. 41: Petal: shape

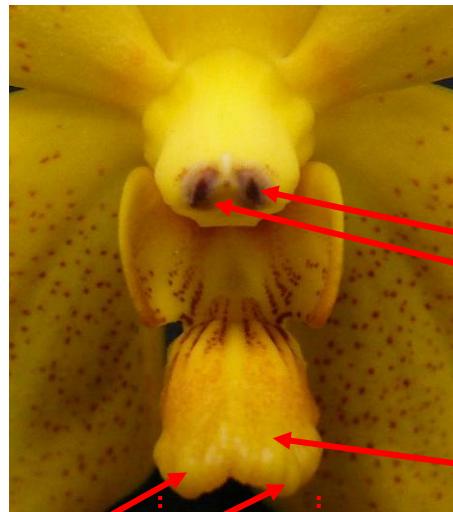

- Ad. 48: Lip: length of apical lobe  
Ad. 49: Lip: width of apical lobe  
Ad. 50: Lip: apical lobe: divided apex  
Ad. 52: Lip: apical lobe: ground colour of apex  
Ad. 54: Lip: lateral lobe: ground colour of inner side  
Ad. 59: Pollinia cap: colour of eyes

colour of  
inner part  
of lateral  
lobe of lip

length of  
apical lobe  
of lip

divided apex  
of apical lobe  
of lip

width of  
apical lobe  
of lip

colour of  
eyes on  
pollinia  
cap

colour of  
apex of  
apical lobe  
of lip

Ad. 51: Lip: apical lobe: wing on side

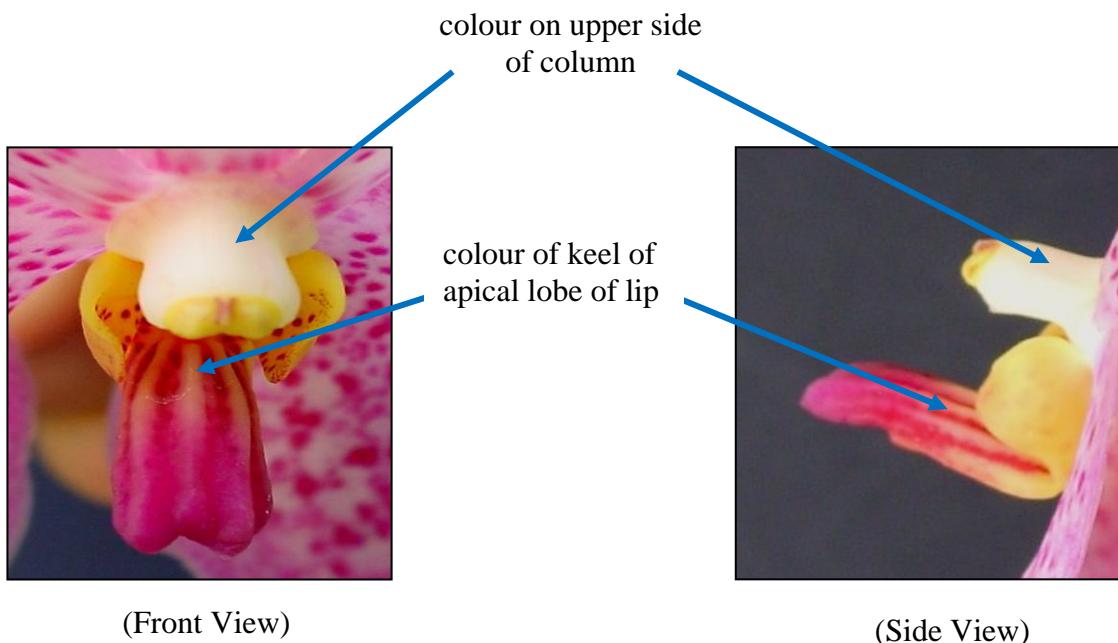

Absent

Present

wing on  
side of  
apical lobe  
of lip

Ad. 53: Lip: apical lobe: colour of keel  
Ad. 58: Column: colour on upper side

|-------------------------|-----------------|-------------------|

9. Information on plant material to be examined or submitted for examination.

9.1 The expression of a characteristic or several characteristics of a variety may be affected by factors, such as pests and disease, chemical treatment (e.g. growth retardants or pesticides), effects of tissue culture, different rootstocks, scions taken from different growth phases of a tree, etc.

9.2 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If the plant material has undergone such treatment, full details of the treatment must be given. In this respect, please indicate below, to the best of your knowledge, if the plant material to be examined has been subjected to:

- (a) Microorganisms (e.g. virus, bacteria, phytoplasma) Yes [ ] No [ ]
- (b) Chemical treatment (e.g. growth retardant, pesticide) Yes [ ] No [ ]
- (c) Tissue culture Yes [ ] No [ ]
- (d) Other factors Yes [ ] No [ ]

Please provide details for where you have indicated "yes".

.....

9.3 Has the plant material to be examined been tested for the presence of virus or other pathogens?

Yes [ ]

(please provide details as specified by the Authority)

No [ ]

10. I hereby declare that, to the best of my knowledge, the information provided in this form is correct:
